AR-X 40 SHOCK ABSORBER

Presenting the next-generation twin-tube rear shock absorber for adventure motorcycles that provides significantly increased on-road comfort and off-road performance. The new Öhlins TTX AR-X 40 shock also is well suited to the higher loads and other operating demands of street and hyper naked bikes.

TTX AR-X 40 features a 40mm (diameter) piston fitted with a high-speed blow-off valve that increases comfort and control over an impressively broad range of damping forces. The new shock is equipped with an integrated hydraulic preload adjuster that keep the preferred ride height at increased load and enables riders to increase preload at the damper by up to 20mm, adjusting seat height by as much as 50mm, depending on the application. The advanced preload adjuster includes an innovative modular interface that facilitates manual or electric adjustment. The TTX AR-X 40 is also compatible with Öhlins SmartEC semi-active suspension technology.

FEATURES

- > TTX-technology
- > Piston with highspeed blow-off valve
- > Preload adjuster integrated in shock head
- > Preload adjustment by up to 20 mm
- > Increased on-road comfort and off-road performance
- > Easy access compression/rebound adjusters, no tools needed.
- > Optional springs available
